

NeuroCare 40Hz

Personalized Neural Entrainment Therapy

Non-invasive | AI-powered | Real-time | Personalized

What It Does

Restores disrupted 40 Hz gamma brainwave patterns in Alzheimer's and MCI patients using non-invasive auditory stimulation that automatically adapts to each patient's brain state in real time. No drugs. No implants. No side effects.

How It Works

1

Wear

Patient wears a lightweight EEG headset

2

Read

System reads brain activity in real time

3

Predict

AI predicts optimal timing 5-10 seconds ahead

4

Stimulate

40 Hz audio activates when brain sync is lowest

Key Results

72%

Targeting Accuracy (vs 64% reactive)
Cohen's $d = 1.21$, $p < 0.001$, $N = 25$

$R^2 = 0.60$

PAC Prediction (5s ahead, held-out subjects)
5x improvement over previous best (0.18)

Why It Matters

- Non-invasive — safe for daily use, no clinical setting required
- Personalized — adapts to each patient's unique neural response
- Proactive — predicts optimal timing before the window passes
- Validated — tested on EEG recordings from 25 participants
